

# How To Measure Your Mattress

## 1- Things you will need:

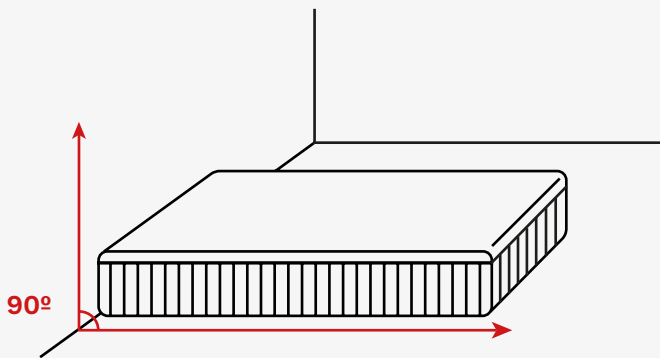

For a correct measurement of your mattress, you will need the following materials:

- x1 Measuring tape (in cm)
- x1 Bar or broom (it must be clean in order to not dirty the mattress fabric)

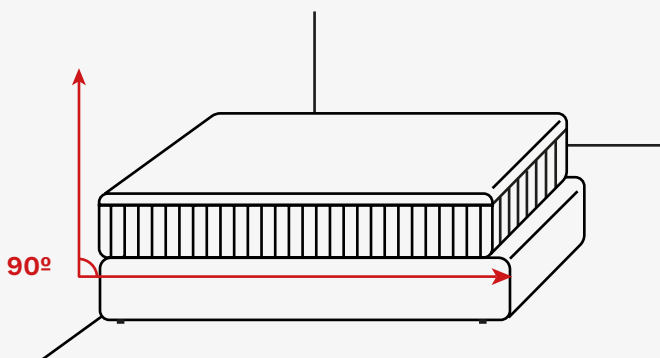

## 2- Preparation:

Place the mattress on a clean, flat surface (e.g. on the floor) and lean one side against the wall at a 90° angle.

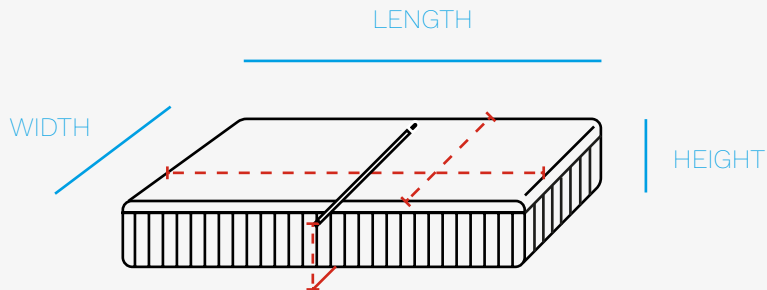

Example of horizontal installation on the floor in front of a wall.

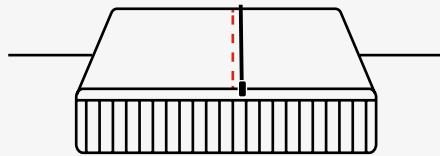

Example of horizontal installation on a spring bed in front of a wall.

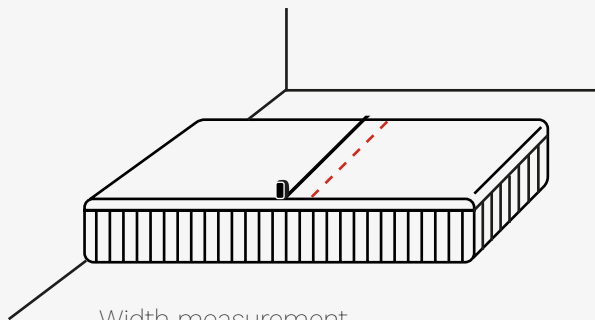

### 3- Measuring the mattress:

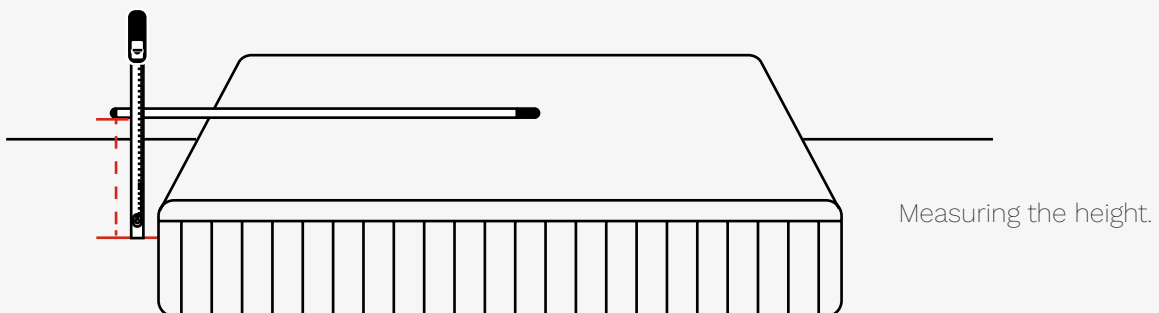

To measure the width and length, use only the measuring tape. For the correct measurement of the height, use the bar or a broom. **To get the height, measure from the bottom to the top surface, including any pillow top.**

Longitudinal measurement.
